

# Approval Queue

## Implementation surfaces

Approval fields: action, owner, risk level, draft, deadline

Actions needing approval: quote, refund, public post, payment change

Decision states: pending, approved, rejected, revised, expired

Escalation: urgent, sensitive, high-value, policy exception

Proof-of-work mockup. Sample architecture only. No client claims or fake results.

# Agent Audit Log

## Implementation surfaces

Log fields: time, agent, tool, action, input summary, output summary

Security fields: permission level, approval ID, source event ID

Failure fields: error message, failed node, recommended fix

Use logs to debug, prove work, and improve governance

Proof-of-work mockup. Sample architecture only. No client claims or fake results.

# Content Operations Agent System

## Implementation surfaces

Agents: researcher, writer, reviewer, formatter

Controls: no public posting without owner approval

Assets: topic list, brand rules, examples, calendar

Quality: clarity, originality, CTA alignment, compliance

Proof-of-work mockup. Sample architecture only. No client claims or fake results.

# Customer Support Agent System

## Implementation surfaces

Support categories: access, billing, bug, refund, product question

Human-only: refunds, policy exceptions, legal language

Metrics: first response draft time, unresolved tickets, escalation count

Security: no sensitive data in prompts unless approved

Proof-of-work mockup. Sample architecture only. No client claims or fake results.

# Lead Follow-Up Agent System

## Implementation surfaces

CRM fields: lead, source, score, priority, status, last touch

Approval queue: draft, risk reason, owner decision, timestamp

Audit log: workflow, action, result, execution ID, record ID

Failure path: bad email, missing data, AI output failure, credential error

Proof-of-work mockup. Sample architecture only. No client claims or fake results.

## Implementation surfaces

Roles: manager, researcher, CRM agent, support agent, reporting agent

Permissions: read-only first; write/update after approval

Observability: audit log, error log, eval scorecard

Kill switch: disable workflow, revoke tokens, manual fallback

Proof-of-work mockup. Sample architecture only. No client claims or fake results.

# Reporting Agent System

## Implementation surfaces

Inputs: leads, sales, support, payments, tasks

Output: weekly summary, risks, wins, next actions

Approval: report can be sent internally; external sharing needs review

Log: generated report ID, data sources, timestamp

Proof-of-work mockup. Sample architecture only. No client claims or fake results.
