YK SYSTEMS | PRACTICAL WORKSHEET

Workflow Audit Worksheet

Map the current process, locate the friction, and define the simplest useful improvement.

START SMALL. BUILD WHAT MATTERS. KEEP HUMAN CONTROL.

Free practical resource | hub.yksystems.ca

Map one repeated process before choosing tools. The goal is to find the simplest useful improvement.

1. Choose the Process

Process name:

Business goal:

How often does it happen?

Who is involved?

2. Identify the Trigger

What starts the process?

Examples:

- A website form is submitted.
- A customer asks for a quote.
- A payment is received.
- A job is marked complete.
- An appointment request arrives.

3. Write the Current Steps

List each step in order:

1.

2.

3.

4.

5.

4. Find the Friction

Where does the process slow down?

Where do leads, tasks, or details get lost?

What gets copied manually?

What message is rewritten repeatedly?

What happens if someone forgets the next step?

5. Define the Better Version

What should happen automatically?

What still needs a person to review it?

Where should the final record be stored?

What is the simplest success metric?

Examples:

- Reply to every new lead within five minutes.
- Keep every quote request in one spreadsheet.
- Send a review request after each completed job.
- Prepare a weekly report automatically.

6. Choose the First Build

Start with one reliable workflow:

Trigger:

Information collected:

Action taken:

Human review:

System of record:
